'Digital Signature Not Found' Error
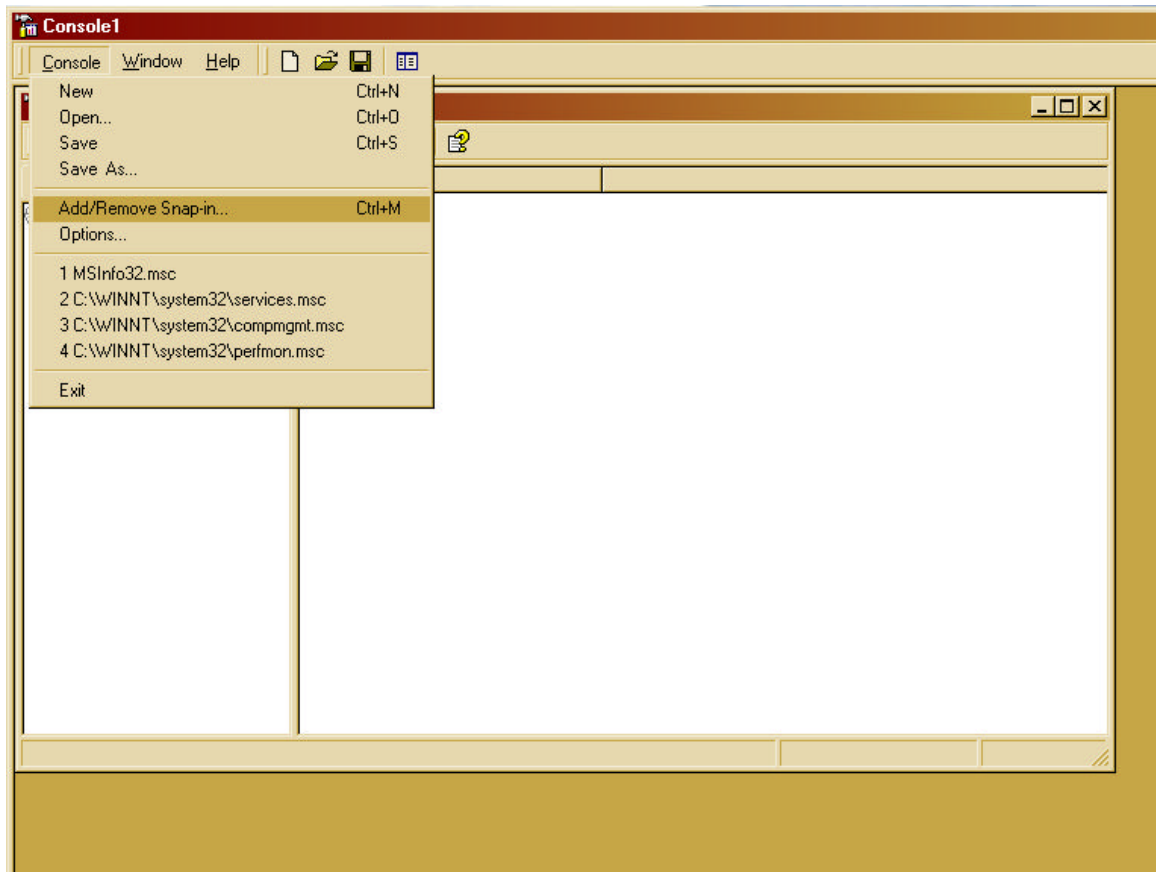

You may receive the error, *'Digital Signature Not Found'* when you install an update of driver, if Windows 2000 incorrectly reads the digital signature, and the local policies for **Unsigned driver installation behavior** and **Unsigned non-driver installation behavior** are set to **Do not allow installation**.
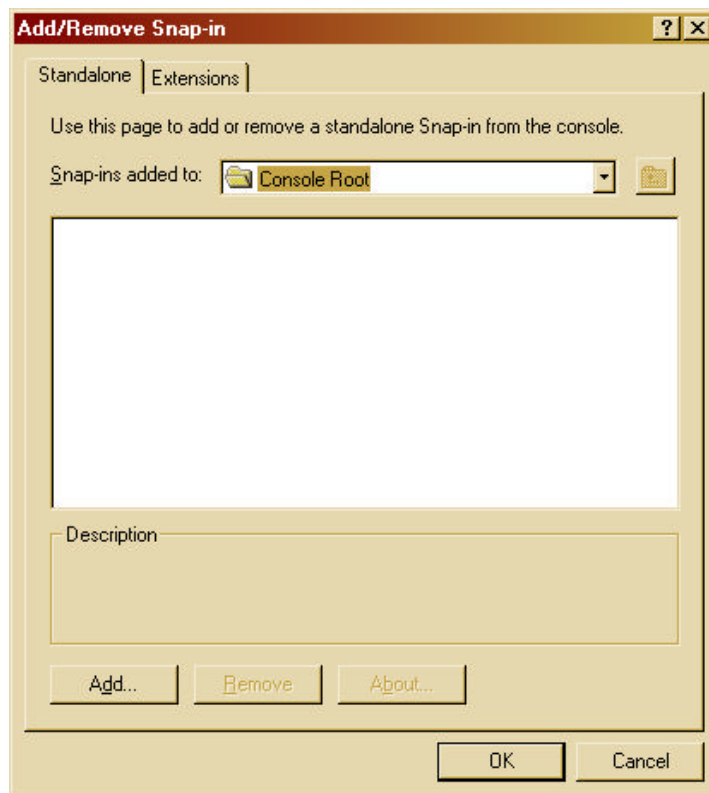

To workaround this issue, temporarily set the polices to *Silently succeed*, when updating a driver or installing a service pack or hotfix:

On **Start ➡ Run** enter **MMC** and press **OK**.
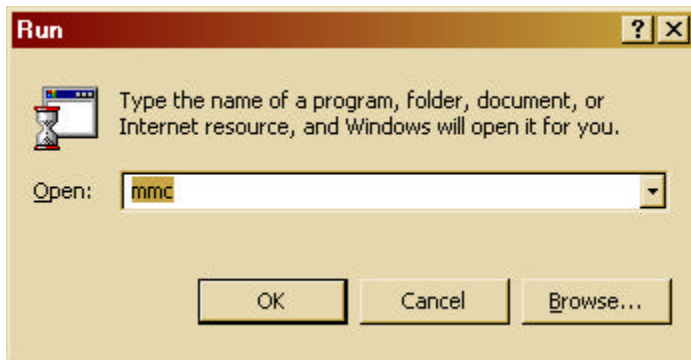

This will bring up the **Console 1** window with the **Console Root** window open. On the **Console 1** window, **Console** menu, press **Add/Remove Snap-in**.
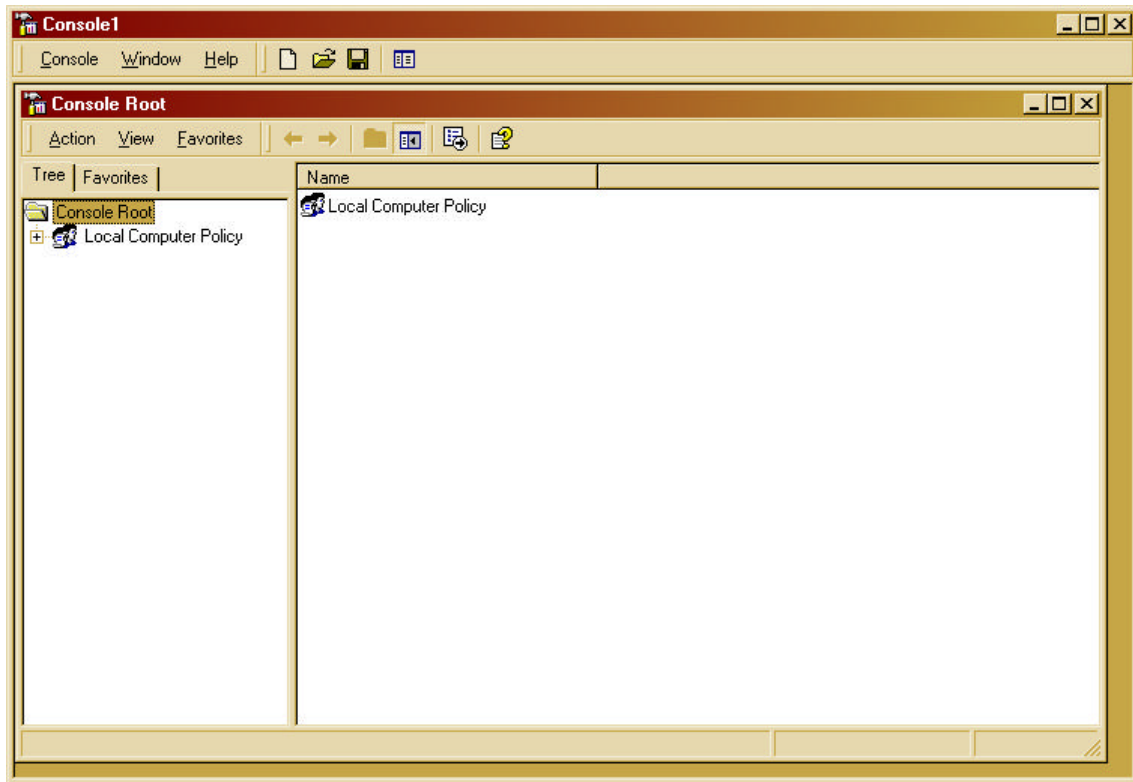

Console1

Console | Window | Help

Menu item	Shortcut
New	Ctrl+N
Open...	Ctrl+O
Save	Ctrl+S
Save As...	
Add/Remove Snap-in...	Ctrl+M
Options...	
1 MSInfo32.msc	
2 C:\WINNT\system32\services.msc	
3 C:\WINNT\system32\compmgmt.msc	
4 C:\WINNT\system32\perfmon.msc	
Exit	

Press **Add**.

Select **Group Policy** and press **Add**.

Press **Finish / Close / OK**. This will bring you back to the **Console window.**

Navigate through:

Console Root
Local Computer Policy
Computer Configuration
Windows Settings
Security Settings
Local Policies
Security Options

Right-click **Unsigned driver installation behavior** and press **Security**.

Toggle the **Local policy setting** to **Silently succeed** and press **OK**.

On the **Console** menu, select **Save**, then **Exit**.

With these settings, you will still get the warning, but the driver will install.
